

CHIEF MATE / CHIEF OFFICER CoC (UNLIMITED, OCEANGOING) – MANAGEMENT LEVEL STCW II/2

Talisay City, Cebu, Philippines Manning: **V.Ships (Fleet 6B Manila)**

Management-level Deck Officer (STCW II/2) with 3+ years' officer watchkeeping across Supramax and Panamax bulk carriers and Panamax container tonnage, on vessels to 71,033 DWT. Chief Mate / Chief Officer Certificate of Competency (Unlimited, Oceangoing) — MARINA Philippines. **Zero incidents across 6 contracts and 3 vessels, every contract completed in full.** Target role: Chief Mate / Chief Officer on bulk carriers, Handysize through Panamax; open to 2nd Officer with a confirmed onboard promotion pathway. Distinctive edge: designs and builds the offline calculation software his own bridge and cargo teams use — 8 tools to date, 5 published as working apps.

- **Zero incidents across 6 contracts and 3 vessels** — every contract served to full term, through 3+ years of watchkeeping on Supramax, Panamax and container tonnage.
- **Promoted 3rd Officer to 2nd Officer within the same fleet**, then qualified Chief Mate / Chief Officer (Unlimited, Oceangoing) while still sailing as 2nd Officer.
- **Built 8 shipboard tools now in active bridge and cargo use**, 5 published as offline single-file apps needing no server, install or signal.
- **Draft surveys held to 0.5 cm** by building the survey engine that applies the heeling, trim and hydrostatic corrections previously worked by hand.
- **Inmarsat-C SafetyNET traffic sorted automatically into 7 tiers**, replacing a manual read of every printout with an indexed, route-filtered log.
- **4 cargo classes loaded and discharged** — woodchips, tapioca chips, dry bulk, containers incl. reefer — on vessels to 71,033 DWT and 4,250 TEU.

Vessel	Type	Rank	Period	Duration
FG Eucalyptus	Supramax Bulk Carrier	2nd Officer	07 Feb 2026 – Present	6m 10d
CL Banyan	Panamax Woodchip Carrier	2nd Officer	13 Sep 2024 – 12 Aug 2025	11m 03d
JACK London	Panamax Container Vessel	2nd Officer	12 Feb 2024 – 05 Apr 2024	1m 23d
JACK London	Panamax Container Vessel	2nd Officer	01 Apr 2023 – 02 Oct 2023	6m 04d
JACK London	Panamax Container Vessel	3rd Officer	09 Mar 2022 – 27 Oct 2022	7m 22d
JACK London	Panamax Container Vessel	3rd Officer	11 Dec 2020 – 12 Jul 2021	7m 03d

Vessel particulars — FG EUCALYPTUS: IMO 9942172, built 2023, 50,011 DWT, LOA 200 m × 32 m, Singapore flag. CL BANYAN: IMO 9936836, built 2023, 71,033 DWT / 57,541 GT, LOA 215 m × 37 m, Singapore flag. JACK LONDON: IMO 9431812, built 2010, 4,250 TEU / 50,278 DWT, LOA 261 m × 32 m, Liberia flag.

CERTIFICATIONS — ALL VALID

- CoC Chief Mate (Management Level, STCW II/2), Unlimited / Oceangoing — MARINA (new issuance in final evaluation; current CoC valid to Sep 2026)
- GMDSS GOC
- Management Level Functions 2 & 3 (2025); BTRM (Dec 2025)
- BST (updated), PSCRB, Advanced Fire Fighting
- Medical First Aid (MEFA) and Medical Care (MECA) — both held
- Ship Security Officer (SSO) — Certificate of Proficiency
- ISPS Security Awareness / Designated Security Duties
- ECDIS Generic + type-specific (JRC, Furuno)
- Singapore (MPA) Certificate of Endorsement
- Philippine Passport, SIRB, Yellow Fever
- PEME: Fit for Duty (valid to Dec 2027)

Passage planning — Berth-to-berth passages worldwide with no navigational incident across 6 contracts: ocean and archipelagic, high-density TSS (Singapore Strait, Malacca), Australian and East Asian coastal waters.

ECDIS — Primary means of navigation on JRC and Furuno: safety contours, chart and permit updating, alarms tuned so genuine alerts are not buried in nuisance ones.

Radar / ARPA — Collision-free watches in restricted visibility and heavy traffic on JRC and Furuno, taking COLREG action early and substantially.

MSI management — GMDSS/NAVTEX/SafetyNET EGC traffic indexed and filtered for route relevance, so the bridge reads what affects the passage, not everything received.

Weather — Vessels kept clear of tropical cyclones and heavy weather by working routing advice into the plan and adjusting track before conditions closed.

Records & publications — Gyro and magnetic error held inside limits by daily azimuth/amplitude observation; charts and publications kept continuously inspection-ready, corrections applied on receipt.

CARGO & DECK OPERATIONS

Cargo experience — Woodchips, tapioca chips, dry bulk and containers incl. reefer, across Supramax, Panamax and 4,250 TEU tonnage; bulk parcels to IMSBC Code.

Cargo watch officer — Sequence monitored against the approved condition, with ballast/deballast, trim, draft and air draft coordinated to hold the ship inside stress and stability limits.

Draft surveys — Held to 0.5 cm at initial, intermediate and final stages; heeling, list and trim corrections applied through a purpose-built engine rather than by hand.

Daily Progress Reporting — Built on period-based rates rather than a running average, so a berth slowing down shows in the completion estimate charterers plan against.

Hold preparation — Presented to grain-clean or charterer's standard per voyage instructions, scheduled against the sea passage available. Folding hatch covers kept weathertight by maintenance and hose testing.

Loading computers — Every condition proved against the approved Loading Manual on OEC LOAD-MASTER and CLOUD before the sequence began, and cross-checked by hand against the hydrostatic tables.

SAFETY & COMPLIANCE

Record — Zero incidents across 6 contracts and 3 vessels; every contract completed in full, no early repatriation.

PSC inspections attended — 3 regimes — AMSA (Australia), Vietnam, Philippines — with certificates, records and SMS evidence prepared ahead of arrival.

Designated Medical Officer (2nd Officer) — Scale A medical stores (MLC 2006) on Singapore-flag tonnage: controlled substances secured and logged, expiries audited on schedule, requisitions raised before stock ran short.

Drills — Fire, abandon ship, enclosed space rescue and MOB led under the Master's oversight, run as timed rehearsals against the muster list so weaknesses surfaced in the drill.

Compliance — Risk assessment and permit-to-work discipline for enclosed space, hot work and working aloft, no permit signed until controls were verified in place; ISM, SMS, SOLAS and MARPOL current in the ship's records.

TOOLS & PROJECTS — SHIPBOARD SOFTWARE

- › **Cargo Loading/Discharge Suite** — replaces the spreadsheet-and-calculator routine for a cargo operation: stowage planning, period-based DPR, heeling, daily log exporting a report to the ship's messaging app.
- › **Draft Survey** — a full survey to 0.5 cm in place of interpolating the tables by hand, at every stage, with document export.
- › **Ballast Voyage Planner** — settles the ballast condition tank by tank before the pump starts; sounding interpolation, fore/aft distribution.
- › **Noon Report Guide** — voyage progress live between noon positions, so a shortfall against ETA shows the day it appears.
- › **EGC Warning Reader** — Inmarsat-C SafetyNET printouts turned into an indexed log (7-tier, ZIP import), replacing a manual read of every message.
- › **MSI Index Log Pipeline** — NAVAREA X/XI and AUSCOAST index logs generated as finished Word documents, removing the retyping the log required.
- › **Medical Inventory System** — Scale A stock tracked against expiry, requisitions raised from the workbook, so shortages surface on schedule.
- › **"Bulk Carrier Knowledge Edition 2025"** — internal reference compiled from the ship's own practice, written to carry across a crew change.

LEADERSHIP & MENTORSHIP

Training — Deck cadets and junior officers brought up to independent watchkeeping, trained on the bridge equipment, cargo operations and watch routine they would be examined on.

Promotion support — Fellow seafarers mentored through promotion to 3rd Officer and 2nd Officer — the clearest available measure that the training took hold.

Adoption — Bridge and cargo teams brought onto the software rather than the author alone, each tool supported aboard until it became ship's practice.
